

Step By Step Instructions

This is a step-by-step guide for compiling and evaluating the proof artifacts of our paper *A case for DOT: Theoretical Foundations for Objects With Pattern Matching and GADT-style Reasoning*.

Our proof artifacts consist of the following parts:

- The `cdot/` directory contains sources of the mechanization of the cDOT calculus. The proof is an extension of pDOT soundness proof.
- The `lambda2Gmu/` directory contains sources of the mechanization of the Lambda2Gmu calculus and `lambda2Gmu_annotated/` contains sources of the variant with additional type annotations, as described in the paper.
- The `translation/` directory contains lemmas related to the translation: the typing of the `lib` term and an example showing inversion of tuple equality using our added inversion rules.

Compiling the Proof

Our proof artifacts contain Coq proof scripts of the calculi in our paper. It compiles with Coq 8.13.0 and the TLC library. We assume that you have followed the instructions of our getting-started guide to set up all requirements for compilation.

The `translation` proof depends on both `cdot` and `lambda2Gmu_annotated`, and `lambda2Gmu_annotated` itself depends on `lambda2Gmu`. The following commands will compile the proof in a proper order:

```
make -C cdot/  
make -C lambda2Gmu/  
make -C lambda2Gmu_annotated/  
make -C translation/
```

If each of the `make` command exits without error, all the proof artifacts are compiled successfully.

Paper-to-Artifact Correspondance

Now we explain the correspondance between important definitions and lemmas in the paper and the formalization in our artifacts.

cDOT Calculus

The mechanization of cDOT is in the `cdot/` directory. Based on the soundness proof of pDOT, the soundness proof uses the locally nameless representation with cofinite quantification to

represent terms. The Sequences library by Xavier Leroy is also included in our proof to ease the reasoning about the reflexive, transitive closure of binary relations.

Definitions

Definition	Paper	Artifact File	Name of Formalization	Proof Notation
Abstract syntax	Page 10, Fig. 2	cdot/Definitions.v	<code>typ</code> , <code>trm</code>	
Term typing rules	Page 11, Fig. 3	cdot/Definitions.v	<code>ty_trm</code>	$G \vdash t : T$
Definition typing rules	Page 11, Fig. 3	cdot/Definitions.v	<code>ty_def</code> , <code>ty_defs</code>	$x; bs; G \vdash d : D, x; bs; G \vdash ds :: T$
Subtyping rules	Page 13, Fig. 4	cdot/Definitions.v	<code>subtyp</code>	$G \vdash T <: U$
Invertible subtyping rules	Page 18, Fig. 8	cdot/SemanticSubtyping.v	<code>subtyp_s</code>	
Reduction	Page 15, Fig. 5	cdot/Reduction.v	<code>red</code>	$(\gamma, t) \mapsto (\gamma', t')$
Lookup	Page 15, Fig. 5	cdot/Lookup.v	<code>lookup_step</code>	$\gamma \llbracket p \sim t \rrbracket, \gamma \llbracket p \sim^* t \rrbracket$

Theorems

Theorem	Artifact File	Name
Theorem 4.1 (Type Safety)	cdot/Safety.v	<code>safety</code>
Theorem 4.2 (Preservation)	cdot/Safety.v	<code>preservation</code>
Theorem 4.3 (Progress)	cdot/Safety.v	<code>progress</code>
Lemma 4.1 (Tag Resolution)	cdot/CanonicalForms.v	<code>tag_resolution</code>
Lemma 4.2 (Field Inversion)	cdot/GADTRules.v	<code>invert_subtyp_fld_t</code>
Lemma 4.3 (Type Member Inversion)	cdot/GADTRules.v	<code>invert_subtyp_rcd_t</code>
Lemma 4.4 ($<:\#$ to $<:\#\#$)	cdot/SemanticSubtyping.v	<code>tight_to_semantic</code>
Lemma 4.5 ($<:\#\#$ to $<:\#$)	cdot/SemanticSubtyping.v	<code>semantic_to_tight</code>
Lemma 4.6 (Field Inversion in $<:\#\#$)	cdot/GADTRules.v	<code>invert_subtyp_trm_s</code>

$\lambda_{2,G\mu}$ Calculus

The `lambda2Gmu/` and `lambda2Gmu_annotated/` directories contain the mechanization of the $\lambda_{2,G\mu}$ calculus we encode into cDOT in the paper. The proof also employs the locally nameless representation with cofinite quantification.

Definition

Definition	Paper	Artifact File	Name of Formalization	Proof Notation
Abstract syntax		lambda2Gmu_annotated/Definitions.v	term	
Operational semantics		lambda2Gmu_annotated/Definitions.v	red	$\frac{e1 \text{ --> } e2}{e1 \text{ --> } e2}$

Theorems

Theorem	Artifact File	Name
Theorem 5.1 (Preservation)	lambda2Gmu_annotated/Preservation.v	preservation_thm
Theorem 5.2 (Progress)	lambda2Gmu_annotated/Progress.v	progress_thm

Translation

The `translation/` directory contains the formalization of our encoding. It contains the typing of the `lib` term and an example showing inversion of tuple equality using the inversion rules in `cDOT`.

Definition/Theorem	Paper	Artifact File	Name
The <code>lib</code>	Page 26	translation/Library.v	libTrm
Lemma A.2	Page 28	translation/Library.v	libTypes
Tuple inversion example		translation/ DestructTupleLemma.v	destruct_tuple_lemma
